

Beaker Label

Rover Label

**** For Transfusion draws (the pink tube), it is critical to have the patient's name on the specimen label EXACTLY like it is on the patient's armband.**

Label both **Chemistry** and **Hematology** microtainers using the example below.
NOTE: Make sure to fold the label at the end of the bar code so the whole bar code is displayed on the one side. If we do not do this, the machine will not read the bar code.

Label tubes with the Patient's name towards the top of the tube
